

## SMa School of Management participates in Asia Homeland Security 2005

The world has been facing an imminent increase in global threats from terrorists and militant groups in recent years. From the 9/11 attacks in the United States to the Bali bombing in Indonesia, it is apparent that every nation is vulnerable to the terrorist threats.

Terrorism has become a scourge that has plagued many countries throughout the world and its knock-on effects, which are far-reaching and pervasive, can no longer be ignored by all. National and homeland security has taken top priority overnight in most countries. It has prompted many countries to develop broad-based, multi-agency and multi-prong approach to counter the threat and put in place efficient security and response measures.

The premiere Asia Homeland Security 2005 held at the Singapore Expo from 9 – 11 November 2005 aims to bring the awareness and education on homeland security in its various vital components covering both public and private security.

SMa School of Management collaborates with Edith Cowan University to bring in Master of Security Management and Master of Information Security and Intelligence at Asia Homeland Security 2005 in order to meet the increasing demand for well-qualified network, information security professionals and security professionals in the marketplace.

The Master of Security Management award will provide an internationally recognised course of study in the specialised area of Security Management. It is designed to meet the learning needs of professional security managers seeking to improve their skills and acquire an in-depth as well as broad knowledge in security risk and risk management, security principles, security technology and security management. The course aims to equip the students with relevant knowledge and skills in security management and security technologies necessary for employment in such areas as: government security, private sector security, strategic facilities security, retail security, financial institutions security, corporate security, and major security organisations. The course emphasises the function and management of security technology in the protection of personnel, information and assets, and is supported by appropriate studies in law and ethics. Graduates are well equipped for a career in the security industry.
